Hopefully always given health with many activities every day. As usual mimin will share an application, game and the latest tips and the most popular only for uptodown pal. Well, on this occasion Mimin would like to recommend an application that you must install to be able to perform daily activities. This application is a chat application that is the GB Whatsapp application. You don't need to ask anymore, of course, 100%, you already know this application. However, what is different from the chat applications that share this share. Alright, just see the reviews below. There is no end to talking about applications, starting from Desktop and mobile applications. Especially the chat application, definitely for you who have a smart phone, you definitely won't miss to install the chat application. There are tons of chat applications that can be used to communicate with friends, colleagues and family. Among other applications Line, Messenger, Wechat, Whatsapp and others. One application that we will discuss is whatsapp application. This application is very well known and has become a top priority application for daily use in communication with others. This popularity makes WhatsApp the number one chat application in the world. However, on the other hand it turns out there are lots of whatsapp applications that are scattered on the Google search engine. What are the whatsapps that I mean? for more details, just look at the review below below. Whatsapp application Whatsapp is a chat application developed by Whatsapp Inc. which has more functions than just a chat application. By using this application that we know of course can send text and picture messages, besides that you can also share files, videos and sounds. Not only that, WhatsApp also allows us to do video communication with others. This application is of two types namely personal whtassap that we often use and whatsapp business. Surely we already know that, right? But with the passage of time of course the application is vulnerable to modification by most creative hands without going through licensing. The modified application is called the mod application, one of which is the Whatsapp GB application. Maybe for some mobile users there are still those who do not know about this one application. GBWhatsApp The GBWhatsApp application is a whatsapp mod application. Actually there are some Whatsapp mod applications that are scattered, namely GB WhatsApp download and Whatsapp Plus. However, in this article Mimin will share the GBWhatsApp application which of course the application that will be shared is the latest version of the WhatsApp GB application. This mod application had experienced a problem that all users who use the latest gbwhatsapp application were mass-banned. Of course this temporary banned is done to break the chain of use of whatsapp mod which is considered detrimental to whatsapp. Temporary blocking is done when user does not quickly switch to the original whatsapp. If the longer the user does not switch to the original whatsapp of course the longer the account can not be used. You can certainly use whatsapp mod again, but it won't last long and suddenly your account is blocked temporarily. For example, if you have just been blocked there will be a time interval for example 60 minutes for you to be able to use the wa gb application again. Then, you can re-use. But it won't be long, your account will be blocked again and this time the time interval has doubled. Of course this is very annoying for users and inevitably have to switch to the original whatsapp. Advantages of GB Whatsapp The modifiers are not unreasonable, now you can use whatsapp mod again and are guaranteed not to be banned anymore because the whatsapp gb apk application has security installed where your account is no longer banned. Features In this application there are tons of features that you can get, here are some excellent features on the Whatsapp GB application which are summarized below. Hiding Online Status This feature is a common feature found in this whatsapp mod application. Buddy can hide the active status. In addition, you can also manipulate the active status of your whatsapp account, so it's as if your account has been inactive for a long time. Hide the Read Status The second feature is a general feature that is very useful for friends who are busy and do not want to be disturbed. Hide your active status buddy. this feature is very suitable when combined with the online status feature. So, with this feature you can read messages without getting noticed from the person. For example, if someone else is sending a message to your number and you read the message from that person, the status of the checklist will not be blue. Temporarily Disabling Applications Do you know the default feature of the phone is the airplane mode feature. Now in this wa gb apk app there are also those tablets. Although this feature has always been embedded called DND. Now the feature is in the form of an airplane mode icon. The function of this feature is of course it can deactivate your whatsapp application, this is very useful if you are playing games without being interrupted from the whatsapp application itself. Various Themes and Custom This is a feature that has been around for a long time on whatsapp mod, by applying a theme it will make your Whatsapp look more attractive. There are also various themes that you can use practically and directly installed on your WhatsApp application. In addition to applying themes, you can also customize your friends. Sometimes practical themes don't match what we want, starting with icons or whatnot. By using this customization feature, you can set your own icon and any part you like, from the checklist, status bar, conversation style and many others. View Deleted Messages and Status This is a feature that is very suitable for you who love to be with your friends. Just imagine if your friend sent a message and made a status intentionally or unintentionally then deleted which will certainly make you curious. By using this feature of course my friend will not ask "what did you send?" again to your friend. Hehehe maybe he doesn't know that we've read the message he deleted. Improve Application Security The Whatsapp mod application innovates by adding features that are no less important, namely security when opening the GB wa application using a pin or fingerprint. With this feature, your WhatsApp app won't be able to be opened by others. It's very protected, right? Always update This is what makes users feel at home to always use the whatsapp mod application.
